

Fixed Dock Shelter.

Energy Saving, Easy To Maintain And Highly Durable.

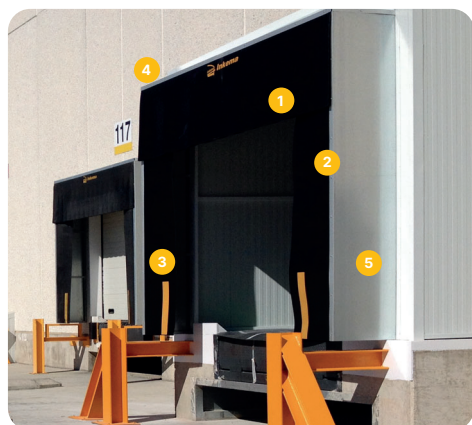

Technical Description.

Inkema's Fixed Dock Shelter - ABFI consists of a galvanised tubular structure, lined with galvanised sheet metal and a set of front canvases. This creates a small tunnel that fits the body of a lorry perfectly

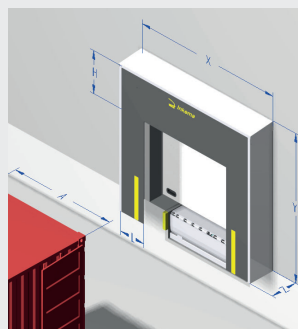

The purpose of the fixed shelter is to provide **perfect insulation** when loading and unloading. This achieves significant energy savings and also **protects the goods**.

The **Fixed Dock Shelter** looks like a projection that is part of the façade, a connection between the lorry and the facility.

- 1 3mm thick PVC coated polyester canvas.
- 2 Galvanised tubular structure.
- 3 Vertical reflective strips.
- 4 Welded top reinforcement to increase durability.
- 5 Galvanised sheet metal sides.

Dimensions.

Coats	Fixed
Broad (X)	3200 mm y 3400 mm
Height (Y)	3200, 3400, 3600, 3800, 4000 mm*
Background (Z)	600 mm*
Width of side canvas (L)	600 mm
Upper canvas height (H)	1000, 1200, 1500 y 2000 mm

* For other special measurements, consult your sales representative.

Structure.

Made with a galvanised profile and closed at the front by a 0.5mm thick PVC tarpaulin that is highly resistant due to the flexible polyester inner mesh with which it is made.

Canvases.

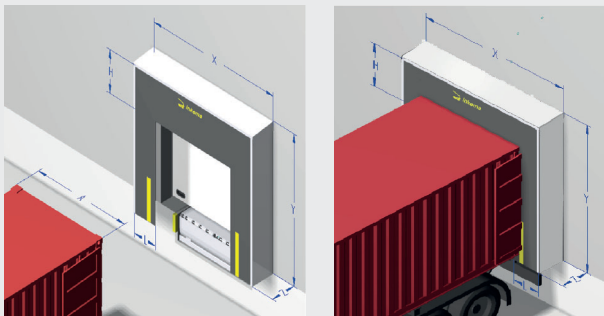

Two lateral canvases and an **upper canvas** form a roof. The side canvases have printed stripes for maneuvering lorries. Made of woven polyester fabric covered with 3mm thick black PVC, **resistant** to knocks and friction.

The top canvas has a **welded reinforcement** to prevent tearing, ensuring **durability** and a **perfect fit** to the lorry's trailer.

Functionality And Efficiency: The Perfect Combination.

Fixed Dock Shelters have been specifically designed for those customers who need a still shelter for their facility, but that is also perfectly sealed.

When goods are transferred, the facility is insulated from the outside, saving energy and, ultimately, making the work area more comfortable.

Safety.

All Fixed Dock Shelters are equipped with **vertical reflective bands** that make it easier for drivers to manoeuvre, and avoid collisions that could damage the facility and the vehicle.

Fixed Dock Shelters installed directly at the facility.

The ABFI coat is made only from high quality materials.

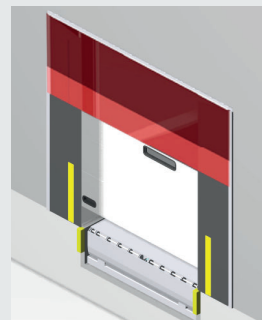

Thanks to ABFI, a high level of insulation is achieved inside the facilities.

Options.

The ABFI Dock Shelter offers various optional features that allow its customers to customize the shelter to suit their needs and requirements.

The range of features is mainly twofold:

- Extending the length of the shelter's top canvas.
- Possibility of adding truck guides to the loading dock.
- Possibility of changing the single upper canvas to a double upper canvas.

Standard 1000mm top tarpaulin, with the option of modifying the length for fleets of different heights.

The guides facilitate the entry of vehicles into the loading docks and protect them from possible impacts.
